# Integrate applications and data across on-site and cloud environments.
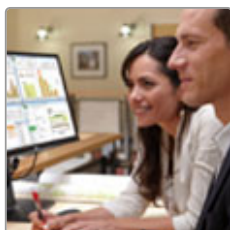

Integrating applications and data from numerous silos allows you to realize the full potential of data analytics and cloud-based environments. It also improves operational efficiency and increases information consistency. With our solutions for application and data integration, it's easy to bring together data from a wide variety of disparate sources — from departmental systems to cloud environments. We can also help you rapidly integrate information, implement master data management, and protect mission-critical data — all while reducing the costs and complexities of information management.

Application and data integration

Integrate any application with ease. Complete on-site and cloud integration in a fraction of the time and at a far lower cost than competing integration solutions. Carry out integration projects without the need for new hardware, software or coding. Complete the integration in days, not months.
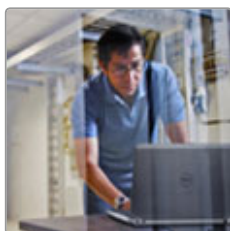

- Boomi AtomSphere

Master data management

Ensure your master data is accurate, complete, cleansed and updated with robust master data management (MDM). Boost the value of MDM initiatives, accelerating time to insight with fast deployment. Capitalize on integration with any combination of cloud and on-site applications. Manage your MDM solution through the cloud.

- Boomi MDM

Database replication and disaster recovery

Ensure business continuity with simple, affordable data replication and integration technology in a single solution. Easily create multiple copies of data in near real time on premises, remotely, or in the cloud. Count on us for high availability and disaster recovery, impact-free migrations and upgrades, and operational reporting.
